

Debenhams Leamington Spa

CASE STUDY

Sector

Retail

Installation

Electrical fit out to new purpose built retail unit to form new store.

Value

£420,000

DESIGN AND BUILD

The team at Thompsons worked with the Client and Main Contractor to follow the Debenhams new design specification to with develop a full electrical and lighting design by Thompsons.

A high quality lighting design was produced working with leading lighting manufacturers to provide the client with a high quality finish to ensure

Thompsons completed the design and build for the following elements:

New Distribution scheme to provide sufficient power throughout the new store.

Installation of new metering to enabling monitoring of electrical loadings.

General power installation for dedicated equipment throughout the store. Power supplies for lift systems and escalator supplies.

New external signage and window bed lighting were also installed.

A new Fire Alarm system has been designed and installed.

New disabled refuge system installed.

Installation of Public Address system.

Tagging Gates and CCTV.

The scope of works during the installation was somewhat fluid and Thompsons were instrumental in the success of the project by being flexible and accommodating as to change.
