

Debenhams Lichfield

CASE STUDY

Sector
Retail

Installation
Electrical installation throughout 3 storey retail outlet

Value
£490,000

Conversion of Existing Retail Unit

The scope of works during the installation was somewhat fluid and Thompsons were instrumental in the success of the project by being flexible and accommodating as to change.

Installation in line with Debenhams design specification with full design by Thompson. Electrical installation over three floors. New Distribution scheme to provide sufficient power throughout the new store together with new metering to enable monitoring of electrical loadings.

General power installation for dedicated equipment throughout the store. Power supplies for lift systems and escalator supplies. Mechanical supplies.

Lighting has been installed throughout the store as per the design scheme; lighting is operated by switching and timeclock arrangement. New external signage and window bed lighting installed.

A new Fire Alarm system has been designed and installed linked to Red Care. New disabled refuge system installed. Installation of Public Address system.

The works were completed over a 28 week period.
